DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 2 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Takahashi et al. (USP 5,583,662).

With respect to claim 1, Yakahashi et al. discloses method of enhancing scan resolution, see (col.10, lines 60-68) suitable for use in a scanner with an optical sensor, (scanner 101 of fig 1) wherein a range that a detecting cell of the optical sensor can detect includes a plurality of original pixels with a predetermined number, and a result of one detection by the detecting cell is called a scanned pixel, (image red by image sensor 101 of fig 1, if appears blurred to obviate the problem the IPU 103 of fig 3, perform pixel by pixel basis, see col.8, lines 40-45) the method comprising: scanning a smooth image region, (scanner 101 of fig 1 and 2, reads a document) wherein the smooth image region includes at least the original pixels with the predetermined number and has a uniform brightness, see (col.10, lines 6-68) to obtain a smooth image data;

and processing scanned images obtained by scanning a document according to the smooth image data, see (col.7, lines 45-50).

With respect to claim 2, Takahashi et al. discloses the method (as shown in fig 1), wherein the smooth image data is obtained prior to scanning the document, (scanning a document on the horizontal and main scan direction, see col.6, lines 30-35).

With respect to claim 7, Takahashi et al. discloses the method (as shown in fig 1-5), wherein the smooth image data is obtained after scanning the document, (the magnification or a processing which changes the amplification of data on the basis of the quantity of light for illumination and data level, is performed after the document is scanned by scanner 101 of fig 1 or 2, at least in the main scan direction after the, see col.8, lines 10-14).

Claims objected to having Allowable Subject Matter

3. Claims 3-6, 8 and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

With respect to claims 3-6, the prior art does not teach or disclose the method, wherein processing the scanned images obtained by scanning the document further comprises: obtaining a calculated smooth brightness of the original pixels corresponding to scanned pixels of the smooth image data; and using a calculated brightness

corresponding to the original pixels with the predetermined minus one in the smooth image region as a standard to calculate the calculated brightness corresponding to original pixels of the document.

With respect to claim 8 and 9 the prior art does not teach or disclose the method, wherein obtaining the scanned pixel while scanning the document comprises, obtaining a calculated smooth brightness of the corresponding original pixels from the scanned pixels of the smooth image data; and using a corresponding calculated brightness of the original pixel with the predetermined number minus one in the smooth image region as a standard to calculate a calculated brightness corresponding to the original pixels of the document.
